

ROOFING EXCELLENCE

Canadian owned & operated

CRC makes roofing, first and foremost. It's been the sole focus of our family business for four generations. We take great pride in making time-tested, professional-grade roofing products.

CRC's Biltmore AR shingles are bigger and heavier than most competitors' comparable products. Larger shingles mean increased profitability through reduced labour and material cost.

Thicker weathering-grade asphalt means more weight and improved granule embedment.

Heavier, tougher fiberglass mat keeps the shingle strong.

1. These headlap fines laminated shingles help ensure that our shingles lay flatter and have better contact to the sealant strip in cooler weather when the shingles are more rigid. This makes for a better looking and more functional shingle right from day one.

2. A wider nail line helps guide installers for proper nail placement. Nails applied in this area ensure optimum performance of the product.

3. Our modified bitumen sealant strip is formulated to be thick and aggressive to promote a strong bond and extraordinary performance with radiant heat from the sun.

4. CRC has refused to eliminate back coating from our shingles. Based on our experience, we believe that back coating adds to the overall asphalt content of the shingle which ensures long term weatherability and performance of our products.

5. CRC's unique Colour Blend Technology provides a consistent blending between product lines and plants, virtually eliminating do not mix situations. Our blends are also regarded as some of the most aesthetically pleasing blends in the industry.
